## Markets Pause as a New COVID Variant Emerges and the Fed Strikes a Hawkish Tone

by Robert Lowry, CFA, Senior Research Analyst – Global Public Markets

Nicholas Breit, CFA, CFP®, Principal, Director of Financial Planning

November 2021

### **Key Observations**

- *Global equity markets took a step back in November, with investors favoring safe-haven assets.*
- *Emergence of the new Omicron COVID variant and more hawkish comments by the Federal Reserve led to market volatility late in the month.*
- *U.S. political gridlock eased with passage of the \$1 trillion infrastructure bill and with the House advancing the “Build Back Better Act” (BBBA).*

### **Market Recap**

Financial markets continued October’s rally early in the month, as earnings season remained robust. S&P 500 earnings grew almost 40 percent year-over-year for the third quarter (with 95 percent of companies reporting<sup>1</sup>). Despite favorable corporate fundamentals and economic data that has printed well, volatility crept into the market as events unfolded late in November. News of a new COVID-19 variant, “Omicron”, surfaced late in the month. This news, coupled with a high U.S. inflation print and a more hawkish tone from the Federal Reserve over the tapering of its asset purchase program, sent global equity markets lower.

In the United States, large cap stocks (S&P 500 Index) fell 0.7 percent for the month, while “riskier” small cap companies, as measured by the Russell 2000 Index, returned -4.2 percent. Information technology was one of the few bright spots for the month and helped growth stocks to outpace value. A strengthening U.S. dollar and stricter COVID measures contributed to the underperformance of international equities versus domestic equities. Emerging markets slightly edged out international developed economies as the MSCI EM Index returned -4.1 percent while the MSCI EAFE Index fell -4.7 percent.

Fixed income markets performed relatively well compared to equity markets, despite elevated interest rate volatility. Interest rates climbed higher earlier in the month amid elevated U.S. inflation readings and the

Federal Reserve's announcement to begin tapering its monthly asset purchases. Later in the month, Fed Chairman Jerome Powell indicated the tapering timeline could be accelerated and acknowledged that higher inflation will likely remain into 2022. Powell's comments sparked a sell-off in equities and investors flocked into safe-haven fixed income.

Ultimately, the U.S. 10-year Treasury yield ended the month at 1.4 percent, 12 basis points below where it started, but over 20 basis points lower than the intra-month high; the Bloomberg U.S. Aggregate Bond Index edged higher, with a gain of 0.3 percent. Credit spreads widened in the risk-off environment, with the Bloomberg U.S. Corporate High Yield Index posting its worst monthly return (-1 percent) for the year. Fears and uncertainty surrounding the new Omicron COVID-19 variant pushed energy prices lower – the main source of weakness behind the Bloomberg Commodity Index's -7.3 percent return for the month.

## Policy Update

Political gridlock eased slightly in November, with the House passing the \$1 trillion infrastructure bill (the 'Infrastructure Investment and Jobs Act') on Friday, November 5. The House vote (228-206) largely followed party lines, though the final vote was crucially aided by the support of 13 House Republicans. With the Senate having already approved the measure in August (on a rarely bipartisan basis, 69-30), the bill went to President Biden's desk and was signed into law on Monday, November 15. While the final infrastructure bill was scaled back from earlier proposals to garner adequate support, the bill ultimately provides \$550 billion in new federal spending for roads, bridges and highways, broadband access and the utility grid.

Democratic leadership aimed to concurrently pass the infrastructure bill and the Biden administration's "Build Back Better Act" (BBBA), though such plans were upended earlier in the month with several moderate House Democrats requesting an updated score by the Congressional Budget Office (CBO) before proceeding with an official vote. In mid-November, the CBO estimated the social safety net and climate bill would add \$367 billion to the federal deficit over 10 years, though the shortfall would be offset by an estimated \$207 billion through greater IRS tax enforcement<sup>2</sup>.

Following the updated CBO score of the "Build Back Better Act", the House passed the roughly \$2 trillion bill on Friday, November 19. The final vote (220-213) passed along strict party lines, with only one Democrat dissenting. Attention now turns to the Senate, which will consider the bill over the coming weeks. Amid an evenly divided Senate (50-50) and with the expectation of no Republican support, centrists Joe Manchin (D-West Virginia) and Kyrsten Sinema (D-Arizona) will wield considerable power in upcoming negotiations; passing the bill using a process called 'reconciliation' will ultimately require unanimous Democratic support (50 votes). Senate Majority Leader Charles Schumer (D-N.Y.) cited a goal of the Senate passing the bill prior to Christmas, though that timeline may be in question.

## Outlook

Despite the recent pullback in November, the economy remains on solid footing. Consumer health remains favorable as does the corporate environment. However, the dichotomy between the sound economic backdrop and the recent developments of the Omicron variant, stubbornly high inflation and the Federal Reserve's tapering is at the forefront of investors' thoughts. These recent developments have added a layer of uncertainty and could contribute to additional market volatility as we close out the year. Investors may have grown accustomed to a low volatility environment in recent years, though it is important to remember that, in a historical context, volatility is a normal occurrence and often creates investment opportunities. We believe managing behavioral biases and favoring diversified portfolios tied to long-term strategic investment goals should put investors in the best position to capture opportunities amid a variety of economic outcomes.
