## Markets Start 2023 Off with a Bang

### *Filter out the noise and stay the course*

Bradford Long, CFA, Partner, Deputy Chief Investment Officer

Collin McGee, CFA, Senior Research Analyst

January 2023

### **Key Observations**

- *Broad asset classes rose higher off 2022 lows on cooling pricing pressures and the possibility of a Fed pause*
- *Equities abroad outperformed amid a declining U.S. dollar and higher than expected growth*
- *The U.S. debt ceiling has sparked conversation, however the need for a resolution will likely abate an insolvency crisis*

### Market Recap

Broad asset classes kicked off the new year higher after a not-so-jolly December. Sentiment turned decidedly positive based on slowing wage and job growth and cooling price pressures. These trends provided optimism for a less hawkish Fed pushing investor expectations from a 0.50% Fed move in February to a 0.25% as of January 31, 2023.<sup>1</sup> Optimism was tempered as investors assess how the economy is weathering higher interest rates, with retail sales and producer pricing showing signs of slowing in the U.S. economy. While these appear

Financial Market January Performance		
	2023	2022
S&P 500	6.3	-18.5
Russell 2000	9.7	-20.8
MSCI EAFE	8.1	-14.5
MSCI EM	7.9	-20.1
Bloomberg US Agg Bond	3.1	-13.0
Bloomberg US HY Corp Bond	3.8	-11.2
FTSE NAREIT Equity REITs	10.7	-24.4
Bloomberg Commodity	-0.5	16.1

to be signs the Fed's fight against inflation may be working, investors continue to weigh the economic cost and viability of a "soft landing" scenario.

Fixed income markets saw a bright start to the year after a muted December, with the 10-year U.S. Treasury yield dropping 35 basis points (bps) as investor demand increased largely on more attractive yields.<sup>2</sup> The yield curve remained inverted with the 10-year Treasury 68 bps below the two year.<sup>2</sup> Lower quality, high yield bonds outperformed investment grade as sentiment turned positive.

The S&P 500 returned 6.3% with domestic winners coming from small caps (+9.7%) and growth-oriented securities (+8.4%<sup>3</sup>). Higher interest rates in 2022 had a material influence on high-growth businesses like the technology sector which lagged many other parts of the market. A more moderate Fed helped fuel their bounce back and the technology-heavy NASDAQ marked its best start to the year since 2001 up 10.7%.<sup>2</sup> Non-U.S. equities rose in the month and widely outpaced their domestic counterparts with tailwinds from a declining U.S. dollar, higher than expected growth in Europe and positive sentiment around China easing restrictions on zero-COVID policies.

Diversifying and inflation sensitive areas of the market such as REITs and commodities were bifurcated in performance, with REITs rallying from 2022 lows and a warmer winter in Europe dragging energy prices and commodities slightly lower.

## The Debt Ceiling Distraction

Historically this budgeting statute has been more procedural than material. However, recent rising debt-to-GDP levels and partisan politics turned procedure into brinksmanship; and similar standoffs in 2011 and 2013 resulted in market volatility. In all, we believe manufactured crises like these are more noise than signal when it comes to a sound investment strategy. In our recent blog post, [The Debt Ceiling Distraction](#), we unpack why we believe this may be an issue that grows over time, but ultimately is resolved without creating lasting systematic issues.

## Outlook

Fresh off our [2023 Outlook – Goodbye TINA](#) research paper, we believe elevated volatility, moderating inflation and markets finding a bottom following the 2022 route will be key factors to position portfolios in 2023. Headline CPI data in December gave us a fresh look into moderating inflation. While year-over-year inflation grew at 6.5%, annualized inflation over the last six months was just 0.34% providing optimism for a soft landing and the Fed moderating their hawkish stance.<sup>4</sup> It is perhaps too early to claim victory on price stability, however, these are

steps in the right direction. As for what inflation and higher rates are doing to company earnings, those impacts are just coming to the surface with the majority of fourth quarter 2022 earnings data being released in February. The barrage of layoff headlines in sectors most impacted in the recent pullback may be an early signal of what is to come from the final quarter of 2022. This incremental information continues to support our positioning of building greater resiliency in portfolios while positioning for upside potential.
